G T PRASHANTH

AI Developer | Full Stack Developer | Machine Learning Enthusiast

Email: gtprashanth2@gmail.com | Phone: +91 63660 62095 | Location: Bengaluru, India
GitHub: github.com/gt1432 | LinkedIn: linkedin.com/in/gt-prashanth

PROFESSIONAL SUMMARY

Passionate and results-driven Computer Science Engineering student specialized in Artificial Intelligence, Machine Learning, and Full Stack Development. Experienced in building end-to-end intelligent systems, including geospatial machine learning models, predictive precision agriculture systems, and hardware-software IoT arrays. Demonstrated ability to write clean, optimized code, collaborate effectively in high-pressure hackathons, and create impact through technology solutions.

EDUCATION

B.Tech in Computer Science Engineering — ***Current***
Presidency University — *Bengaluru, India*

Maintaining excellent academic records. Focused on core computer science subjects including OOPs, DBMS, Data Structures & Algorithms, Machine Learning, and Web Technologies.

Pre-University College (Class 11 & 12) — ***Completed***
Sri Chaitanya PU College, Sarjapura — *Sarjapura, India*

Secondary School Education (Class 10) — ***Completed***
Gnana Jyoti School — *Bengaluru, India*

TECHNICAL SKILLS

Programming:	Python, Java, C, PHP
Web Technologies:	HTML5, CSS3, JavaScript, React, Bootstrap, Tailwind CSS, Flask
AI & Machine Learning:	TensorFlow, Scikit-learn, OpenCV, Pandas, NumPy, Deep Learning
Databases & Tools:	MySQL, Git, GitHub, REST APIs
IoT & Hardware:	Arduino, Microcontrollers, Sensors, Hardware Design
Specialized Concepts:	Geospatial Analytics, GIS (Geographic Information Systems), OOPs, DBMS, Data Structures

KEY PROJECTS

GeoMiner AI — *Geospatial Resource Predictor* — *2025*

Designed and implemented an AI system to analyze geospatial maps, recognize mineral patterns, and predict geological distributions. Built end-to-end ML pipelines with Scikit-learn, visualizing outputs on a web dashboard.

Technologies: Python, Flask, Machine Learning, Geospatial Analytics, GIS, Data Visualization

AgriGeo AI (GeoSmart-Agri) — *Precision Agriculture Platform* — *2025*

Built a precision agriculture platform utilizing satellite telemetry, geospatial mappings, and crop datasets to analyze soil health, humidity levels, and suggest smart irrigation plans.

Technologies: HTML5, CSS3, JavaScript, Leaflet GIS, Bootstrap, Geospatial Analytics

Smart Greenhouse Energy System — *IoT Automation Project* — *2025*

Integrated hardware microcontrollers (Arduino) with sensory arrays to monitor and regulate microclimates (light, moisture, humidity). Streamed data to a centralized Flask dashboard.

Technologies: Arduino, IoT, C++, Sensors, Hardware Design, Flask, Dashboard

Interactive Code Compiler — *Web Development Project* *2025*

Developed a glassmorphic coding dashboard enabling compile-and-run capabilities for Java, Python, and C structures directly in-browser. Integrated secure backend execution containers.

Technologies: Java, Spring Boot, HTML5, CSS3, JavaScript, REST APIs

ACHIEVEMENTS & CERTIFICATIONS

• **Hackathon Excellence:** Pitched and demonstrated AgriGeo AI (GeoSmart-Agri), winning top accolades at college and regional events.
• **Machine Learning Specialization:** Certified by DeepLearning.AI & Stanford University (Coursera).
• **Geospatial Data Analysis with Python:** Certified by Geospatial Association.
• **Active Open Source Contributor:** Maintained compilation and learning hub dashboards (EduBridge, focuslearn).
